

POLAROID T REX FBS

SITE PREPARATION

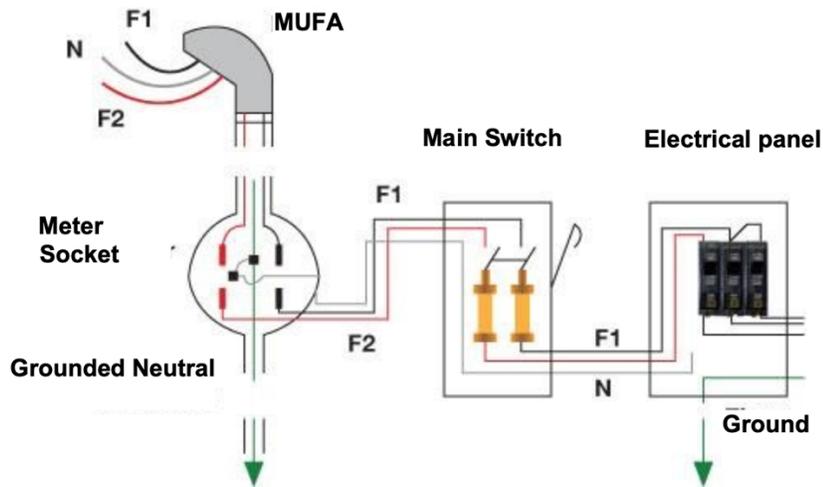

polaroid

Electrical Requirements

The power supply is required through a 220V AC circuit, consisting of 2 lines of 110V/127V AC or a single phase, according to your local electrical service provider, a neutral line, and a physical ground line. The physical ground is only for backup and protection against any electrical incident.

The printer's power supply requires:

A two-phase regulator with an input and output of 220V AC, 2 phases, physical ground, and neutral, with a capacity of 6 KVA 24A. It should be connected to a load center with a 45A thermal breaker.

SITE REQUIREMENTS

1. The workspace should be enclosed to prevent excessive dust in the area and should have a controlled temperature between 70°F and 73°F, especially if the ambient temperature is very high or low.
2. Air extraction is necessary if the location is poorly ventilated.
3. Relative humidity should be between 30% and 50% without condensation.
4. Lighting should be provided by fluorescent lamps or white LED lights.
5. The site should be dust-free or isolated from other work areas with excessive dust or particles.
6. The floor should be polished concrete or ceramic; carpet or laminate flooring is not recommended as they can cause static.
7. A minimum perimeter of 10 feet should be allocated as free space for the operation and handling of materials used with the equipment.

COMPUTER REQUIREMENTS

- Intel Core i9 or AMD Ryzen processor
- Windows 10 or 11, 64-bit Professional version
- Processor with a clock speed of 5GHz
- USB ports at 2.0 or higher (some equipment may require USB 3 or LAN connection)
- Minimum of 16GB DDR4 RAM
- Hard drive with at least 500GB

EQUIPMENT DIMENSIONS

Without Packaging:

- **Length:** 6.56 ft
- **Width:** 12.86 ft
- **Height:** 3.28 ft
- **Weight without packaging:** 1102 lbs

POWER CONSUMPTION

- Equipment Power Supply: 220-240V / 20A, 50Hz/60Hz
- Total Consumption: 3150 Watts/Hr (*calculated at 90% load*)
